

Analysis of energy resources

The analysis provides a summary of information about energetic resources in participating countries for the last 20 years. The problems linked to energy resources in partnership countries or worldwide, an increase of energy consumption and energy intensity are mentioned, with possible solutions suggested.

Students are given an overview about the energetic situation in four European countries. They have the opportunity to compare the effectivity and environmental aspect of the renewable and non renewable energy resources in Turkey, Bulgaria, the Czech Republic and Slovakia.
